
Use Case Scenario Example

Scenario Name:	User Registration
Participating actors:	Guest
Entry condition:	Guest Registering
Flow of events:	
Actor's Actions: 1. Guest Clicks Register Button. 3. Guest Inputs Requested Information Into Each Field. 4. Guest Clicks "Register Now" Button	System's Response: 2. Program prompts user to input information into the following fields; email, password, confirm password 5. System Checks if password and confirm password fields match 6. System Checks if email entered is unique
Exception Handling:	1. If password and confirm password field do not match once "Register Now" button is pressed, the system clears the password fields and displays message "Passwords Do Not Match", allows retry 2. If email is not unique (email is in use by another user), the system displays message "Email Already In Use" and clears all entered information, allows retry
Exit condition:	User Becomes Successfully Registered.
